👤 About Me

Full-stack developer specializing in Shopify commerce, enterprise system integration, and DevOps. At Meekco.Asia I was appointed by the CTO to lead a bidirectional SAP Business One to Shopify integration across 12 data domains with a lean team. Certified Kubernetes Administrator (CKA), experienced end-to-end across web, mobile, self-hosted infrastructure, and cloud orchestration, with strong foundations in containerization, automation, and scalable system design.

🧠 TECHNICAL SKILLS

Integration & ERP

SAP Business One (Service Layer), ActivePieces, n8n

Backend

Django, Laravel, Next.js, FastAPI, Node.js, Hono

DevOps

Docker, Kubernetes, CI/CD, GitHub Actions, Traefik, Ansible, Linux Server Management, Self-Hosting

Shopify

Admin & Storefront GraphQL, Functions (WASM), Checkout/POS/Admin/Theme Extensions, Liquid, Metafields, Polaris, Gadget

Mobile

React Native, Flutter, Ionic

Payment Gateway

Fiuu, Stripe

Frontend

Vue, React, Angular, Next.js, Remix, shadcn/ui

Databases

MySQL, PostgreSQL, Redis

Others

RESTful API, GraphQL, MCP (Model Context Protocol), Version Control (GitHub, GitLab), AI-Assisted Development (Claude, Gemini, v0.dev)

🧰 EXPERIENCE

Software Developer, Meekco.Asia

2025 – Present | TTDI, Kuala Lumpur

- Appointed by the CTO as Person-In-Charge (PIC) of a bidirectional SAP Business One to Shopify integration across 12 data domains (items, inventory, pricing, customers, orders, invoices, payments, deliveries, returns, and B2B discounts), leading a lean 2-developer build.
- Built the orchestration layer on a customized ActivePieces fork, authoring custom Pieces, Actions, and Triggers against the SAP B1 Service Layer and Shopify Admin GraphQL API with rate-limit backoff and pagination.
- Designed a delta-sync architecture using high-water-mark polling and reconciliation with idempotent upserts, keeping around 30 SAP tables in sync without a data-store middleware.
- Developed a React and Hono operations dashboard and shipped 4 Shopify admin UI extensions, giving merchants live sync controls and per-order sync history.
- Delivered around 70 theme and storefront customizations across 13 client Shopify stores, and standardized delivery with reusable GitHub Actions CI/CD.
- Self-hosted and operated production infrastructure on the company Webdock.io VPS (BigBang automation platform, Materia SaaS, Lago, Mautic, Peppermint) using Docker Compose and Traefik with Let's Encrypt.

- Mentored a second developer and produced client-facing architecture and implementation documentation.

Technical Lead, Plisca (M) Sdn Bhd

2024 – 2025 | Ukay Perdana

- Led the development team, conducted code reviews, and established best practices.
- Designed and implemented CI/CD pipelines, streamlining deployment processes.
- Deployed and managed applications using Docker & Kubernetes.
- Conducted technical training sessions on GeoNode, GeoServer, Docker, Django, and FastAPI.
- Architected infrastructure and database designs (ERD) for critical projects.
- **Proactive Team Development:** Self-initiated and deployed knowledge sharing infrastructure (custom portal + Colanode) to enhance team collaboration and knowledge retention

Software Developer, Plisca (M) Sdn Bhd

2023 – 2024 | Ukay Perdana

Developed web applications using frontend and backend technologies. Built server-side applications and APIs with Node.JS, Python and PHP. Implemented responsive and user- friendly interfaces. Company focuses on Geospatial Portal.

Merchandiser, Petron Shamelin

2020 – 2023 | Shamelin Perkasa

Managed product displays and ensured optimal stock levels in retail outlets. Improved inventory management and successfully increased product sales through strategic product positioning and customer engagement.

EDUCATION

Diploma in Cyber Forensics, Cybernetics International College of Technologies

2018 – 2020

LANGUAGE

- English
- Malay

CERTIFICATIONS

- CKA (Certified Kubernetes Administrator)
- CCSD (Certificate in DevOps Foundation)

PROJECTS

SAP Business One to Shopify Integration,

Technologies: SAP B1 Service Layer, Shopify Admin GraphQL, ActivePieces, Hono, React, DBML, MCP

- Modeled the end-to-end SAP-to-Shopify data mapping in DBML with 6 ERD diagrams (item-to-product, business-partner-to-customer, order-to-SAP).
- Implemented a B2B pricing engine as a Shopify Function driven by a metafield discount matrix, gated on SAP business-partner and item-group metadata.
- Authored and published an MCP server and Claude plugin exposing SAP B1 Service Layer docs to accelerate AI-assisted integration development.
- Built a stateful mock SAP Service Layer and load-test harness to benchmark sync throughput and memory for capacity planning.

PosLoy - Shopify Loyalty Platform, Technologies: Gadget, Stripe, Shopify

Checkout/POS/Admin/Customer-Account/Theme Extensions, App Proxy

- Architected an end-to-end Shopify loyalty platform with points, tiers, referrals, daily check-in streaks, and birthday/campaign bonuses.
- Delivered across checkout UI, POS UI, admin, customer-account, and theme app extensions on Gadget with Stripe subscription billing.
- Exposed app-proxy APIs for storefront integration and merchant configuration.

JD Sports Self-Checkout Kiosk,

Technologies: Shopify Checkout UI Extension, Remix, TypeScript, Fiuu, DuitNow QR, PWA

- Built a cashier-less self-checkout kiosk, auto-detecting payment and marking orders paid with no cashier involvement.
- Integrated Payment Gateway to Kiosk with Stripe and Fiuu for Tap Payment and Duitnow QR method payment.
- Packaged and deployed the kiosk as a PWA on Honeywell retail tablets, solving Shopify CDN service-worker scoping for reliable operation.

Materia - AI Image Studio SaaS,

Technologies: Next.js 16, React 19, PostgreSQL/Prisma, Redis/BullMQ, NextAuth, Stripe, Gemini/Vertex

- Designed and shipped a production multi-tenant B2B AI Image Studio (editorial garment-swap and jewelry try-on) deployed on the company Webdock.io VPS.
- Built a Redis/BullMQ worker queue, Stripe credit billing, and dual Gemini providers (AI Studio and Vertex) toggleable at runtime.
- Implemented a full admin, monitoring, and audit panel with NextAuth v5 authentication.

Smart ETL - Workflow Automation Platform, Technologies: Django, React, TypeScript, XYFlow, Material-UI, PostgreSQL, Redis, Celery, Docker, Firebase, AWS S3, NodeODM 12/2024 – Present

- Worked with CTO to develop an AI/LLM workflow nodes including LLMBasicChain and Information Extractor (similar to n8n functionality)
- Built computer vision nodes for Face Image Blurring and License Plate Blurring using Detectron2 and OpenCV
- Created communication output nodes for Discord, WhatsApp, and Telegram integration
- Implemented Outlook Calendar event creation node for workflow automation
- Developed geospatial processing nodes (Union and Dissolve) following FME methodology
- Extended modular node system to support multiple workflow categories (AI, Output, Geospatial)

WISS, Technologies: Laravel, Inertia.js, Vue.js, Filament, React Native, MySQL, GitLab CI/CD, Ansible 2024 – 2025

- Led a cross-functional team of 5 (3 web, 2 mobile) delivering an enterprise Laravel and Inertia.js/Vue.js application.
- Built a Filament admin panel for content and user management, and supervised the React Native mobile app for cross-platform parity.
- Designed GitLab CI/CD pipelines for automated testing and deployment, with Ansible-scripted production releases.
- Coordinated web and mobile teams to keep APIs consistent across platforms.
- Established code review processes and mentored the team on standards.

KPM, Technologies: AWS, Kubernetes, Draw.io, Modular Monolith Architecture 2024 – 2025

- Provided cloud-architecture consultancy for Malaysia's Ministry of Education digital transformation.
- Designed hybrid public/private cloud infrastructure and analyzed AWS service configuration for cost and scalability.
- Architected Kubernetes deployment strategies and a modular-monolith migration path toward microservices.
- Produced technical documentation and architecture diagrams for infrastructure planning.

JPS Portal 2023 – 2024

Technologies: Statamic CMS, Laravel, PHP, Markdown, YAML, HTML/CSS, JavaScript

- Single-handedly built three regional water-management portals (Kuala Lumpur, Putrajaya, Labuan) for Malaysia's Department of Irrigation and Drainage.
- Used Statamic flat-file CMS for performance and database-free content management.
- Created a customizable template system for region-specific variations on a shared core layout.
- Built Markdown/YAML content workflows for non-technical staff, with responsive layouts across devices.
- Configured Disaster Recovery Center (DRC) infrastructure and managed the full lifecycle from requirements to deployment and maintenance.

MyIFOS, Technologies: Django, Angular, PostgreSQL, Python, TypeScript 2023 – 2023

- Built a workflow-management platform for JUPEM (Department of Survey and Mapping Malaysia).
- Developed Django APIs and data models for forest-operations management, plus Angular components for the UI and workflow automation.
- Integrated frontend and backend to streamline JUPEM's operational workflows.

MyGeohub 2023 – 2024

Technologies: GeoNode, GeoServer, Django, OpenLayers, PostgreSQL, Docker, Python

- Built a centralized geospatial data hub for Malaysian government agencies on the open-source GeoNode platform.
- Integrated GeoServer for spatial data management and Web Map Services (WMS/WFS), with OpenLayers interactive mapping.
- Developed Django backends (models, views, API endpoints) and established data validation and quality-control processes.
- Delivered a 4-day client training program covering GeoNode administration, GeoServer configuration, Docker deployment, and Django development.

STAPS, Technologies: Django, Django Admin, Ionic Framework, Xcode 2023 – 2023

- Contributed to a spatial-planning and analysis system (first company project); built and customized the Django admin interface for data management.
- Returned a year later to fix bugs in the Ionic mobile app.
- Bundled and deployed the iOS build via Xcode on macOS.

Interests

Technical Interest

- Linux system administration and optimization (Arch Linux)
- Continuous learning through tech communities (daily.dev )
- Productivity optimization and workflow automation
- Open-source technology exploration

Personal Projects

Team Knowledge Hub & Colanode Deployment 2025 – 2025

Technologies: Colanode, Docker, Linux Server Administration, Markdown, Self-hosting

- **Self-initiated team performance improvement project** - Identified knowledge sharing gaps and implemented comprehensive solution
- **Phase 1:** Developed custom knowledge sharing portal with gamification features using Level-Up package for developer engagement
- **Phase 2:** Migrated to self-hosted Colanode deployment for enhanced collaboration and Notion-like functionality
- **Infrastructure Management:** Configured and maintained Linux servers for reliable self-hosting environment
- **Team Leadership:** Motivated team adoption and usage, resulting in improved knowledge sharing and collaboration
- **Open Source Implementation:** Leveraged open-source Colanode as cost-effective alternative to proprietary tools

Acoustic Treats Business Website 2025 – 2025

Technologies: v0.dev AI, Vercel, Modern Web Development

- Developed professional business website for family acoustics company using cutting-edge AI-assisted development
- Utilized v0.dev  for rapid prototyping and modern web design implementation
- Deployed on Vercel platform ensuring optimal performance and reliability
- Demonstrated adaptability with emerging AI development tools and modern deployment practices
